Ultra-soft bristles to use post-surgery or around delicate or sore tissues

Scan to see our Educational Videos

TePe Gentle Care™

Softest brush for daily care with sensitivity, dry mouth, or delicate tissues

TePe® Denture Care

Long bristles to adapt for cleaning removable dentures

TePe® Tongue Cleaner

Tapered design to reduce gag reflex and 3 blades for a triple effect with one stroke

Prevention Compass™

TePe Prevention Compass™ Protocol is a 7-step chairside approach for behavior change that incorporates existing behavioral theories, neuroscience, and digital technology into a comprehensive path for lasting change.

- Identity – Behavior change starts first with an identity change.**
 - The “I am” statement embodies who the person is related to oral health.
 - Create an “I am” statement.
- Assessment – Assess every patient using multiple modalities.**
 - Gather periodontal, implant, and risk assessment data.
- Motivation – Make biofilm visible to highlight urgency.**
 - Utilize disclosing solution, intra-oral photography and scanning.
- Training – Build capability by focusing on one small change.**
 - Increase knowledge & skill by using the teach-back technique, models, videos, brochures, demos.
 - Leverage personalized technology using video for at home reference and applications.
- Environment – Address external and social factors.**
 - Discuss factors that impact new behavior: cues to trigger new habit, social norms, supportive people.
- Planning – Use goals and habits to form sustainable change.**
 - Use TePe Digital Recommendation.
 - Use your patient’s environment and training to create a plan that reflects their identity related to oral health.
Identity = Cue (trigger for new habit) + Routine (when, where, how)
Example: In my bathroom, after washing my face at night, I will use an interdental brush between my upper back teeth.
- Evaluation – Develop a connection with your patient to follow-up, reinforce, and adjust plans.**
 - Include in Chart Note: Patient’s identity statement: “I am ...”, Current Routine, Focus Areas, Plan, Patient Quote, and any Recommendations.
